SKILLS

Languages

`Java` `Python` `SQL`

Data & Pipeline

`Kafka` `Elasticsearch` `Redis` `MySQL`

Cloud & Infra

`AWS` `Kubernetes` `Docker`

Backend

`Spring Boot`

EDUCATION

Seokyeong University
B.S. Software Engineering
GPA 3.73 / 4.5
Mar 2020 – Aug 2026 (Expected)

HONORS & CERTIFICATIONS

Major General's Commendation
9th Division, ROK Army

Excellence Award
Programming Contest · Sep 2025

OPIc Advanced Low(AL)
English Proficiency

GPA & Language Rank 1st
Seokyeong Univ. · Fall 2023

EXPERIENCE

Software Engineer — Oct - Dec 2025

Obzen (CRM Enterprise) × Seokyeong University SW Academy
K-Software Empowerment BootCamp · Ministry of Science and ICT, Korea

- Identified inefficiencies in marketing campaign reporting processes; automated end-to-end insight generation by building a hybrid AI agent (RAG + Function Calling) on live campaign data, enabling marketing teams to self-serve LTV/CAC strategy reports without engineering support; Function Calling over full-context injection reduced LLM token overhead by **~80%**

  `Gemini · Spring AI · Elasticsearch`

- Generated actionable business insights by developing a 3-tier performance monitoring dashboard with funnel & cohort analysis, enabling marketing teams to track customer lifetime value and repurchase rates without engineering support; improved dashboard query performance by **440%** via denormalized Elasticsearch indexing; designed nightly LTV cohort batch pipeline to isolate heavy aggregation from OLTP transaction window

  `Elasticsearch · SQL · Kafka Connect · SSE`

- Designed and developed two parallel cloud-based data pipelines: a flash-sale FCFS reservation system processing Peak **2,900 RPS** with **0** overbooking across **10,655** concurrent requests; and a real-time behavior-event ETL pipeline — embedded a JS tracking SDK to automate client-side event capture, routed through Kafka → Elasticsearch via Sink Connector, sustaining **20,000+** events/sec with **0%** data loss and **0** server errors

  `Kafka · Redis · MySQL · Kubernetes · AWS`

- Led platform development as primary architect in a 2-person team under CRM industry professional mentoring; defined problem scope from marketing domain requirements, designed end-to-end system architecture, and drove development through Kubernetes deployment and k6 load-test validation

Infrastructure Engineer — Apr - Oct 2024

LG CNS Mentoring Program · Han-ium ICT

- Designed and developed a cloud-based ETL pipeline on AWS EC2 to automate data ingestion (Kafka → MySQL) with VPC network isolation; improved operational efficiency by eliminating manual data transfer processes

  `AWS EC2 · VPC · Kafka · MySQL · Python`

- Configured JDBC Sink Connector to automate Kafka topic → MySQL ingestion, including schema mapping, upsert logic, and timestamp transformation

Intelligence Analyst (Mandatory Military Service) — 2021 - 2022

9th Division, ROK Army

- Collected and analyzed field monitoring data from detection equipment; generated periodic analytical reports with data tables and charts to support senior command decision-making
- Prepared and delivered findings for high-stakes inspections led by Major General, developing strong stakeholder communication and data presentation skills under pressure

English Interpreter & Teaching Assistant — Oct 2022 - Aug 2024

KinderMama English Kindergarten

- Collaborated with diverse groups — foreign instructors, Korean parents, and management — facilitating real-time interpretation and daily briefings across a fully English-speaking environment over **22 months**
- Analyzed student progress data and generated periodic summary reports for parents; acted as communication bridge between management directives and frontline instructors, developing strong cross-functional communication skills
